

An AI-Powered Compliance Practice

A short note on what I'm building, and why I need your help

The idea in one line

A service where small businesses simply send their invoices on WhatsApp, and their GST returns get prepared automatically by AI — reviewed and filed by a qualified CA (you). The client never touches any software. They just see: **“Sent invoices. Return filed. Done.”**

The problem (you know this better than me)

- A small client paying ₹2,000–5,000/month generates almost as much work as a bigger one: chasing invoices, manual data entry, matching purchases with GSTR-2B, preparing GSTR-1 and 3B, every single month.
- Most of this work is mechanical, not professional judgement. But it eats your team's hours, so small clients are low-margin and you can only serve so many.
- Clients are also unhappy: they get reminders, penalties, and last-minute calls for documents.

What the AI actually does

I build AI agents professionally. Concretely, the system will do four things:

1. Reads invoices	Client sends photos/PDFs of invoices on WhatsApp. AI extracts GSTIN, invoice number, taxable value, CGST/SGST/IGST — even from messy photos — into a clean ledger.
2. Reconciles	Automatically matches purchase invoices against GSTR-2B and flags mismatches, missing invoices, and ITC issues — the most tedious part of the monthly cycle.
3. Prepares returns	Generates the ready-to-upload GSTR-1 / GSTR-3B data, with a one-page summary showing exactly what will be filed and why.
4. Chases clients	Sends automatic WhatsApp reminders for pending invoices and deadlines, so nobody on your team has to call clients repeatedly.

Important: AI prepares; it never files on its own. Every return goes through a CA's review and sign-off. You stay fully in control — the AI is your junior staff that works at 100x speed and never gets tired.

What changes for a CA practice

Today	With this system
~2 hours per client per month on data entry, follow-ups, reconciliation	~10 minutes per client: review the AI-prepared summary, approve, file
One team can handle 50–80 GST clients	The same team can handle 300–500 clients
Small clients = low margin	Small clients = high margin, at scale

Why this works as a business

- India has crores of GST-registered businesses; most outsource compliance and pay monthly. The market is enormous, recurring, and deadline-driven — clients can't skip a month.
- We sell the **finished work**, not software. Clients don't need to learn anything new; CAs don't need to change how they sign off. AI just removes the grunt work in between.
- Globally, investors (including Y Combinator) are actively backing exactly this model: AI-native firms that deliver the service itself instead of selling tools.

What I'm asking from you

- **Teach me the workflow:** walk me through one real GSTR-1 + GSTR-3B filing end-to-end (screen-share is enough), so I automate the right things.
- **Pilot with 3-5 of your smallest clients:** I handle invoice collection and data prep with AI; you review and file as usual. Zero risk — your normal process stays the final check.
- **Be the professional in the loop:** if the pilot saves your team real hours, we decide together what this becomes — a tool for your practice, or a venture we build jointly.

What I bring

I build AI agent systems — the same technology behind tools like ChatGPT and Claude, but wired into real workflows: reading documents, cross-checking data, and producing ready-to-review output. I'll handle all the technology, hosting, and iteration. You bring the domain expertise and the professional judgement that AI cannot replace.

Next step: 30 minutes on a call. Show me one filing; I'll show you a working invoice-extraction demo. If it doesn't impress you, we drop it — no hard feelings.
